PROJECTS

RossmannV5:

Project goal: Rebuild rossmann.pl in React using Redux for storage and next.js as server side rendering. Was primarily responsible for the purchasing process

Role: Front End Developer

Result: The website was released 10.11.2018 to overall positive feedback from the user base.

PayU Implementation:

Project goal: Implement the PayU payment provider on rossmann.pl including blik, one-click card payments and of course bank transfers.

Role: Back End Developer

Results: We released PayU on production without any challenges or breaches

GPS Engagement Platform:

Project goal: Creating a new Engagement Platform for the Global Procurement Services as Web App, to increase the visibility and accelerate the engagement between procurement and it's stakeholders

Role: Developer

Progress: Prototype delivered, awaiting final call to jumpstart development of the actual tool

MILO:

Project goal: Creating a Data mining tool for Procurement, to assist the Commodity Leaders in identifying spend in our BI platform.

Role: Senior Developer

Result: Pilot was a huge success, getting ready for the release to the procurement community

Clinical Study Budgeting Management:

Project goal: Building a new consolidation mechanism for Clinical Research Operatives Bids containing around 200 fields in different formats

Role: Developer

Result: A big success, other science units have shown interest in developing a similar tool for them.

Standard Operational Report:

Project goal: Procurement Dashboard built as a 3-layer application. Main Access database as the first, data processing layer also in Access, lastly presentation in both Excel and PowerPoint.

Role: Developer

Result: A solid 1 year run of the dashboard, generating 63 Excels and PowerPoints in under 10 mins
